PROFESSIONAL SUMMARY

I specialize in problems that don't yet have clear ownership, language, or structure: the space between the people who create systems and the people who have to operate within them. Nearly two decades from metallurgical quality control to multi-state healthcare operations, and corporate development. Most of what I build has to work with me out of the room: tools a partner site deploys without editing, materials that go out under someone else's name, training that runs without a presenter. The domain changes. The job doesn't.

CORE COMPETENCIES

Leadership & Operations: turnaround and P&L recovery · corporate and business development · financial modeling · program execution · operational standardization · training and staff development · LEAN / 5S

Regulatory & Compliance: CMS reimbursement policy · coverage determinations (NCD, LCD, LCA) · life-safety and facility code (NFPA 99) · documentation standards and audit response · screening-instrument design · metallurgical quality control

Technology & Data: IT and information-security administration · incident response · database design · data modeling (ER diagrams, semantic object models) · reporting systems · LLM-augmented workflows and knowledge systems · HTML, CSS, Java, SQL, G-code

Design, Media & Drafting: technical and editorial writing · information design · web design and front-end build · Photoshop, Illustrator, Dreamweaver, CorelDRAW, Rhino · AutoCAD, Master CAM

PROFESSIONAL EXPERIENCE

Shared Health Services, Inc. — Johnson City, TN — Oct 2019 – Present

Vice President of Administration & Corporate Development (Director of HR & IT → Chief Administrative Officer → VP)

Corporate Development & Growth

- Helped lead the post-pandemic turnaround with a corporate staff of four. Back to profitability within two years of a $250K shortfall and the loss of half the company's contracts.
- Rebuilt the business model around the company's own IP (compliance, documentation and training systems), replacing per-procedure staffing contracts with flat-fee partnerships at near-zero marginal delivery cost.
- Built the financial model used to underwrite partnerships from CMS reimbursement rules, facility wage indexes, physician fee schedules, zip-code demand forecasts and historical staffing data.
- Built the company's first market-intelligence engine: a national census of target facilities mapped against competitor presence, and a daily lead sheet scored from website analytics.
- Closed the majority of the company's consulting partnerships, hospital and physician-group accounts across multiple states, from first contact to signed multi-year contract.

Regulatory Intelligence & Partner Enablement

- Translated CMS, Medicare contractor, FDA and accreditation changes into partner-specific guidance across jurisdictions: up to 18 targeted communications a day, written for hospital executives through clinical technicians.
- Built a library of clinical instruments, each sourced to the rule it rests on and deployable at any partner site without editing. It includes an HBOT screening system covering all 15 Medicare-covered indications.
- Built partner chargemasters and annual payment comparisons from published rates and facility wage indexes, plus a reference mapping 44 Medicare HBOT denial codes to their documentation requirements.
- Instituted a verification-first review standard that catches coding, jurisdictional, policy and reporting errors before they reach partners or publication.

Operations, Technology, & Security

- Authored the Joint Commission and DNV survey-preparation guide (five readiness instruments grounded in NFPA 99). Conducted annual on-site ten-point audits alongside clinical reviewers.

- Designed the partner portal infrastructure: co-branded, access-controlled libraries anchored by two interactive documentation algorithms that link each stage of care to its documentation, coding and reimbursement requirements.
- Ran HR across a multi-state workforce. Wrote the controlled documentation framework: policies, clinical protocols, care algorithms, competency standards, employee handbook.
- Administered company-wide IT. Led incident response to a weeks-long cyberattack on company leadership, containing an account compromise and a $43K fraudulent-wire attempt with zero financial loss, then implemented mandatory MFA and staff security training.
- Coordinated the response to a multi-period IRS Employee Retention Credit examination.

Communications & Education

- Built the communications function as a one-person shop: corporate website, a 68-post clinical blog, and two bylined pieces for WoundSource.
- Wrote, designed and illustrated a weekly staff newsletter solo from 2020 to 2023, then expanded it to a monthly edition with the full corporate team contributing.
- Developed WOUNDWISE, a 23-unit partner-enablement program deployed under partners' own brands.
- Designed two browser-based training games (60 expert-reviewed cases) and an eight-deck, ~219-slide AI-narrated onboarding curriculum.

Meritor, Inc. — Morristown, TN 2016 – 2019

Heat Treat Lab Technician (Tier Two Certified)

- Metallurgical quality control on heat-treated drivetrain components for commercial freight and military tactical wheeled vehicles: three-gas analysis, hardness, bainite, effective case depth, retained austenite and microstructure testing.
- Maintained industrial-furnace reliability. Authored departmental work instructions. Programmed the department's five-axis saw and CNC equipment.
- Ran the department's technology: computer systems, lab instrumentation, weekly database backup, daily programming and troubleshooting.

EARLIER CAREER (2008 – 2016)

Built a foundation across skilled trades, manufacturing quality, and technical design: field service at Sears (2008); a tenure at Shared Health Services as draftsman (2009), designing wound-care and hyperbaric center layouts; production training and LEAN/5S as a lead trainer at Exide Technologies; pipe-organ fabrication at R.A. Colby; and a second Shared Health Services tenure in maintenance and drafting (2015–2016) before specializing in heat-treat metallurgy at Meritor. Each return to Shared Health Services came in a broader role — the arc that led to the 2019 leadership track.

EDUCATION

Master of Business Administration (MBA) — Western Governors University 2026

34 competency units, zero transfer credit | Accelerated track | Excellence Award, Ethical Leadership

B.S., Management Information Systems — Concordia University Chicago 2019

magna cum laude · GPA 3.95 · Senior project: *Creating a Way to Track Nonconforming Parts During the Heat Treatment Process*

A.A.S., Industrial Technology — Northeast State Community College 2016

President's Club, Fall 2015 and Spring 2016 · quality management, GD&T, CNC, automation

Diploma, Maintenance / Millwright Mechanic — Tennessee Technology Center, Elizabethton 2009

CERTIFICATIONS

Adobe Certified Associate, Visual Design (2020) · Heat Treat Lab Technician, Tier Two, Meritor (2018) · Laser Alignment (2009)

SELECTED AWARDS & RECOGNITION

- **MarCom Platinum (2025) —** SHS Blog, "Compliant Documentation Is Storytelling"
- **MarCom Gold (2025) —** SHS Blog, "From CEO to CNA and Beyond"
- **Healthcare Digital Marketing Awards Gold (2025) —** Wound Care Support Website
- **Digital Health Awards Merit (2025) —** Wound Care Support Website
- **MarCom Honorable Mention (2025) —** Wound Care Support Website
